Considerations for Encapsulant Material Selection for Phosphor-Converted LEDs December 16, 2011 .
Introduction: White light from Light Emitting Diodes (LEDs) is generated by combining blue photons from LED chips with photons of other colors from phosphor material(s).

Considerations for Encapsulant Material Selection for

Packaging failures. The majority of electronic parts failures are packaging-related. [citation needed]
Packaging, as the barrier between electronic parts and the environment, is very susceptible to environmental factors. Thermal expansion produces mechanical stresses that may cause material fatigue, especially when the thermal expansion coefficients of the materials are different.

Abstract This document provides guidance and an overview to high level general features and updates for SUSE Linux Enterprise Server 11 Service Pack 4 (SP4). Besides architecture or product-specific information, it also describes the capabilities and limitations of SLES 11 SP4. General documentation may be found at: .

Release Notes for SUSE Linux Enterprise Server 11 Service

Sensor technology for the rapid detection of the analytes with high sensitivity and selectivity has several challenges. Despite the challenges, colorimetric sensors have been widely accepted for its high sensitive and selective response towards various analytes.
