This work is related to Hao Chen's study on the role of alloying elements on phase transformation in steels. Dor Amram also dealt with phase transformation in Fe-based systems, i.e. Fe-Au. His work aims at analyzing micro- and nano-scale size effects on phase transformations in general.

system, the phase diagram usually has the general appearance of that shown in Fig. 3. The diagram consists of two single-phase fields separated by a two-phase field. The boundary between the liquid field and the two-phase field in Fig. 3 is called the liquidus; that between the two-phase field and solid field is the solidus.
