The refractory materials should be able to with stand

- High temperature
- Sudden changes of temperature
- Load at service conditions
- Chemical and abrasive action of phases

The refractory material s hould not contaminate the material with which it is in contact.

LECTURE 9 Refractory Materials

Any material can be described as a "refractory," if it can withstand the action of abrasive or corrosive solids, liquids or gases at high temperatures. The various combinations of operating conditions in which refractories are used, make it necessary to manufacture a range of refractory materials with different properties.
