

### **population aging is latin pdf**

Overview. Population aging is a shift in the distribution of a country's population towards older ages. This is usually reflected in an increase in the population's mean and median ages, a decline in the proportion of the population composed of children, and a rise in the proportion of the population composed of elderly. Population ageing is widespread across the world.

### **Population ageing - Wikipedia**

The aging of Japan is thought to outweigh all other nations, with Japan being purported to have the highest proportion of elderly citizens. Japan is experiencing a "super-aging" society both in rural and urban areas. According to 2014 estimates, 33.0% of the Japanese population is above the age of 60, 25.9% are aged 65 or above, and 12.5% are aged 75 or above.

The World Population Is Growing Older. With continued declines in fertility and mortality, the global population's shift toward an older age structure, known as population aging, will accelerate.

### **2018 World Population Data Sheet**

Terms. Age-sex structure: The composition of a population as determined by the number or proportion of males and females in each age category. The age-sex structure of a population is the cumulative result of past trends in fertility, mortality, and migration. Information on age-sex composition is essential for the description and analysis of many other types of demographic data.
