modifier - modifier le code - modifier Wikidata L'  $e^-$  , un des composants de l' atome avec les neutrons et les protons , est une particule élémentaire qui possède une charge élémentaire de signe négatif. Il est fondamental en chimie , car il participe à presque tous les types de réactions chimiques et constitue un élément primordial des liaisons présentes dans les molécules ...

Thermoelectric materials show the thermoelectric effect in a strong or convenient form.. The thermoelectric effect refers to phenomena by which either a temperature difference creates an electric potential or an electric potential creates a temperature difference. These phenomena are known more specifically as the Seebeck effect (converting temperature to current), Peltier effect (converting ...

El físico alemán Johann Wilhelm Hittorf emprendió el estudio de la conductividad eléctrica de gases enrarecidos. En 1869, descubrió un brillo emitido desde el cátodo que aumentaba de tamaño cuando el gas disminuía de presión. En 1876, el también físico alemán Eugen Goldstein mostró que los rayos de ese brillo proyectaban una sombra, y los denominó «rayos catódicos». [30]
